

SIRUI R SERIES PROFESSIONAL TRIPODS

R

Cross platform tripods for big cameras, long lenses and professional video equipment.

The R3 and R4 series are uniquely designed to satisfy many needs. They can be used for still photography - with big cameras and large lenses - plus, by changing the mounting plate, they can be converted into high quality tripods for video cameras and DSLRs with digital video capabilities.

Perfect for still and video camera systems

R3, R4 Series tripods have a unique mounting platform that can accept a wide range of mounting plates, bowl adapters, leveling devices, etc. for use with professional film and digital SLR and video cameras. This approach lets you quickly exchange plates with different cameras or heads (ball head, gimbal, etc.) already attached.

The center column-free design allows you to get as close as 3.5 inches (9cm) to the ground for low angle or macro shots!

Built for heavy equipment

The R3/R4 series is especially well suited for use with large, heavy telephoto lenses - for photographing birds and other forms of wildlife.

It is also an excellent choice when shooting with high quality, professional video equipment.

Total Flexibility

R3/R4 Series tripods offer outstanding flexibility. You can use these tripods for DSLR, medium and large format and video cameras. The flat mounting plate can be easily exchanged with a wide range of adapters for various shooting applications.

R3/R4 Series tripods have the largest diameter leg tubes in the SIRUI lineup. With a maximum diameter of 36mm, they have a maximum load capacity of 44 lb. (20kg) - ideal for heavy cameras and telephoto lenses!

Features

1. Unique design of R3/R4 allows you to change mounting plates for different applications
2. Built-in bubble level helps make horizontal adjustments fast and easy
3. For speed and convenience, each leg has an automatic leg angle lock mechanism
4. 2 position leg angle for uneven terrain
5. Retractable spiked feet for outdoor photography

Optional bowls and leveling heads for video applications

R-3203

R-4203

R-4203L

What's included:

custom case,
padded shoulder strap
and tools

What Makes Sirui Professional Tripods Your Best Choice?

Forged for Greater Strength and Reduced Weight

Instead of using traditional casting methods typical of tripod construction, Sirui is a pioneer in using forging technology in manufacturing. During the forging process, the deformation and recrystallization of metal causes the structure of the metal to be more welded together and compact - greatly increasing its strength-to-weight ratio. This enables Sirui to build products with exceptional strength and durability, that are surprisingly light.

Forging ensures the integrity of metallic fibers so that it remains consistent inside & out. Good integrity allows for a longer lifetime as well as better performance.

In fact, the forging process can create parts that are much stronger than those manufactured by any other metalworking process.

Forged

The added strength of forging allows thinner, lighter components.

Micro structure of the metal after forging. The consistent structure provides very impressive strength.

Cast

Others' cast components must be thicker and heavier to provide the same strength.

Micro structure of the metal after casting process. Inconsistent structure with many gaps and weaknesses.

8 Layers of Carbon Fiber for Superior Load Capacity

SIRUI is one of the few manufacturers who make their own Carbon fiber leg tubes. The use of 100% carbon fiber and 8 cross pattern layers, makes SIRUI tripods and monopods capable of supporting impressive load capacities, while providing a lightweight product. In addition to providing high strength and low weight, carbon fiber is also highly resistant to temperature changes, friction (no need for lubrication) and corrosion.

Custom Anodized Surface Treatment

All SIRUI products undergo a special anodized surface treatment that makes all metal surfaces highly resistant to wear and increases durability and weather resistance. Anodizing is an environmentally safe electro-chemical process. This also prepares the surface to provide better adhesion of colored finishes.

Temperature Tolerance Test

Photographers often work in extreme environments, like blazing deserts or sub-zero mountaintops. It is vital that your equipment works under these conditions. That is why we torture-test all of our products - under conditions that far exceed what most people will ever experience (-40° ~ 212°F/-40° ~ 100°C). SIRUI is the first Chinese manufacturer to continuously perform the 4-hour test (equal to many years of use) on all products.

Certified Longevity Tests For Quality & Reliability

To confirm the quality and reliability of SIRUI tripods (and our dedication to details), an independent testing lab (SGS) subjected the leg angle lock spring mechanisms to exhaustive longevity tests. The test reports show that even after 100,000 actuations, the springs continued to perform perfectly!

Half-turn Leg Locks

To lock the legs of SIRUI tripods/monopods, we utilize twisting locks for maximum reliability and stability. Simply twist the rubber leg locks 1/2 turn and the legs will extend by themselves.

Precision Leg Tubes

The difference in diameter of N/TX/R/SN series tripod tubes is only 3 mm. Thanks to precision manufacturing, the legs open and close easily, while the small diameter difference provides added leg stability.

Retractable Steel Spikes

For added stability outdoors, SIRUI 2/3/4 Series tripods and monopods have retractable stainless steel spikes, stored inside the slip-resistant rubber feet.

Free Short Center Column

TX/N/M/SN/R3/R4 series tripods allow low angle shooting for unique perspectives and macro photography. And most models include a free short center column (excludes R series and T-005/025) for added flexibility.

Convert to Monopod

The detachable leg of S-N/N/M series tripods lets you transform your tripod into a monopod! Reduces the amount of equipment you need to carry and makes your camera bag or backpack lighter.

Sirui 6 Year Warranty

Sirui backs up its products with a 6 Year Warranty!

Non-Twist Center Column/Legs

All SIRUI center columns and legs have keyed, grooved channels, that prevent twisting - providing additional stability and safety for your photographic equipment.
